

Video 1: The sound of the robot walking is me rubbing my fingernails against the guitar guard. And the sound of turning my head after many attempts I finally settled on a rusty drawer opening and closing sound.

Video 2: I started off with an iPhone alarm. In the middle of the knife cutting the apple, I used the sound of a piece of metal rubbing the glass, and finally I used the sound of soap to simulate the sound of the apple falling.

Video 3: In this video, I take a mouthful of water and then put the microphone in my mouth to imitate the sound of a girl underwater.
